

Mira Diary <miiradiary@gmail.com>

[WordPress Plugin Directory] Review in Progress: El Doviz

1 message

WordPress.org Plugin Directory <plugins@wordpress.org>

26 May 2026 at 16:26

To: miiira <miiradiary@gmail.com>

👋 miiira - Let's improve your plugin!

Thank you for submitting your plugin, "El Doviz".

Our volunteer reviewers, tools, and/or AI aids identified **issues in your plugin that require your attention**.

We've **pending** your submission to give you a chance to review and fix these common issues.

This team handles approximately 1,500 plugin reviews each week. That's a lot. To make the most of this process, **please do your part and help us help you**; otherwise, your plugin won't be approved.

🤖 Please note that this message was generated using a combination of humans, algorithms, and AI in varying proportions. It may not have been reviewed by a human. All AI outputs are marked with the ✨ emoji. Pay attention to it, it's quite accurate.

Who are we?

We are a group of volunteers who **help you identify common issues** so that **you can make your plugin more secure, compatible, reliable and compliant** with the guidelines.

For consistency and better communication, your plugin review will be assigned to a single volunteer who will assist you throughout the entire review. However, response times may vary depending on how much time the volunteer is able to contribute to the team and if whether they need to consult something with the rest of the team.

The review process

Please **read this email in full and check each issue**, as well as the links to the documentation and the provided examples. Also, search for any other similar occurrences of the same issue that are not explicitly mentioned in the email. Make sure you understand the issues so that you can incorporate them into your existing skillset.

If you decide to continue with the review process, **you must fix any issues, test your plugin, upload a corrected version** and then reply to this email. In case of any doubt, please fix everything else and ask your questions alongside the update.

Your plugin is **manually checked by a volunteer** who sends you the remaining identified issues in the plugin.

We will be devoting our time to reviewing your plugin, we ask that you honor this by following the instructions.

Note: Volunteers are not your QA team. They are here to help you identify and understand issues so that you can improve and maintain your plugin in the future. Fixing the issues is your responsibility.

If there are no further issues, the plugin will be approved 🎉

Be brief and direct in your reply (please, avoid copy-pasting bloated AI responses, our AI is quite brief), be patient and make sure you have **addressed all the issues and tested your plugin before responding**.

It is disheartening to receive an updated plugin only to find that only a few issues have been resolved, or that it causes a fatal error upon activation.

When not making adequate progress in your review, **it will be delayed and eventually rejected**, for the sake of volunteers devoting their time and other plugin authors who correctly follow the review process. Once rejected under these circumstances, it will not be reviewed again.

Each volunteer can review up to 400 plugins per week, and they love to have life besides reviewing plugins, so please make things easier for us.

Understanding the Review Queue

When you reply, your plugin enters the review queue again. Fewer review cycles mean quicker approval, while multiple reviews can extend the process to weeks or months.

Tip: Carefully fix all issues and test your plugin before resubmitting to speed up approval.

This process is designed to help you improve your plugin while making the review experience faster and more efficient for everyone.

Is the name of this plugin descriptive and distinctive, and does it respect the trademarks and project names of others?

Choosing a name for a plugin can be challenging - it needs to be distinctive and meaningful, but also carefully chosen to avoid overlapping with existing plugins or inadvertently use someone else's trademark or project name in a way that could lead to confusion.

📖 General plugin name/slug requirements

- Plugin names and slugs **must not be too generic**; they could **briefly describe what the plugin does**.
- Plugin names and slugs **can be original and unique**, even if they don't describe the functionality directly — as long as they are recognizable and distinctive.
- Plugin names and slugs **must be distinguishable** from those of other plugins to avoid confusion.
- Plugin names and slugs **must respect others' trademarks and project names**. If your plugin includes a trademark or project name that you do not own, you must clearly mention it in a way that denotes that there is no affiliation.

This plugin display name(s) is/are "El Doviz" and the slug is "el-doviz" . The AI has detected ✨ "Doviz" as

potential trademark(s).

We asked a trained AI about common issues with plugin names and it thinks there might be a problem.

✨ The display name may have naming issues because "Doviz" appears to be a distinctive third-party project or brand term, and the current name does not clearly describe the plugin's functionality for directory users.

For example, for your plugin:

- An alternative name may be: ✨ Miiira Turkish Exchange Rates
- An alternative slug may be: ✨ miiira-turkish-exchange-rates

 These suggestions were made by the AI. Bear in mind that a skilled human, either you or a volunteer from the Plugin Review Team, may spot issues with the new suggested name.

 As with the rest of the review, you should address this issue and make any necessary changes. Simply changing the name without first checking what the issue is and how you can solve it won't help most of the time. Failure to address any of the issues raised will result in your submission being rejected for failing to demonstrate the expected level of effort in resolving the issues identified during the review process.

Steps to resolve this issue

Choose a display name and slug that is distinctive, describes your plugin and/or uses a unique name, while respecting others' trademarks and project names, (*check for further details below*) then:

1. **Update the display name in both the readme file and plugin headers.**
2. **Update the slug in your plugin files**, for example in the internationalization functions.
3. Reply to this email **requesting a new slug reservation**.
In addition to the changes you have made to your code, we also need to reserve and allocate the new slug that you have chosen for your submission.
4. Upload a new version via the **"Add your plugin"** page.
If you are confident that the new name is suitable, there is no need to wait for confirmation of the new slug reservation. You may see a warning regarding the 'Text Domain', as we haven't changed the slug on our side yet. That's fine.

Also, please, don't check just this names, **there are other places or resources where you may not use any trademarked (or commonly recognized) terms** in a manner that that is likely to cause confusion. This includes (but is not limited to):

- Your username **miiira** and your display name.
- The plugin contributor's username and display name.
 - miiira - miiira
- The URLs of this plugin.
- Graphic resources such as this plugin icons and banners.

Are you the owner? If there are any issues with the trademark or project name and this is indeed an official plugin, it is likely that we have not been able to identify the current owner of the plugin as the trademark / project owner.

*Keep in mind, if you were hired as a freelance developer or a consultant specifically to create this plugin, then **they must own the plugin**. Being granted permission is not enough. This is for their legal protection as well as yours. They can add you as a committer to the plugin so you can manage it from your account, but **the owner must be them**, not a temp-employee.*

In order to solve this, you can do one of the following:

- Prove that you legally have the right to the original name/slug.
- Change your user email to an official one or provide us with the user account for an official owner to whom we should transfer the plugin (they can create a new account if they need to)

Note: Should you have this plugin approved with the correct name and then go back to infringement of trademarks, we will close your plugin. Please don't do this, even if you see other people 'getting away with it.' We have a lot of plugins and we're contacting everyone in small batches to be manageable. They won't get away with it forever, and they risk being banned from the directory. Which no one wants.

Tips on choosing a suitable name (and avoiding back-and-forth in this process).

Choosing a name for a plugin can be challenging - it needs to be distinctive and meaningful, but also carefully chosen to avoid overlapping with existing plugins or inadvertently use someone else's trademark or project name in a way that could lead to confusion.

Avoid Name Similarity

In this context, by "**similar**" we mean something that **goes beyond a letter-by-letter or word-by-word comparison**. We also look into similar naming patterns, lookalike names or meanings.

You must ensure that the name of your plugin is distinctive and does not cause confusion with others.

How can you check this? Easy!

1. Perform a **search engine query** for the plugin name ([Google](#), [DuckDuckGo](#), [Bing](#), [ChatGPT](#)) and parts of it.
2. If you find other plugins with "**similar**" names, change your plugin's name to something more distinctive and that won't cause confusion.
3. Go back to step 1 and check again, just in case.

 Changing the plugin name by adding a additional letter or a **generic word** (Advanced, Simple, etc) will probably not solve this problem at all.

 Your plugin name has to **clearly stand out from other's plugins**. You could try adding a coined term, your personal brand or a unique identifier at the beginning of the name. We rely on your creativity!

Avoid Trademark / Project Names Confusion

Identify trademarks and project names mentioned in your plugin name "El Doviz" and the slug "el-doviz". The AI has detected ✨ "Doviz" as potential trademark(s).

To avoid potential misuse:

- If a trademark or project name is used at the **beginning** of your plugin name/slug and you are **not the owner**, it could imply false affiliation.
- If the trademark appears elsewhere in the name/slug but **is not part of a clear structure** indicating unaffiliation, it may still be problematic.
- Do not use any altered forms of a trademark, such as [blend words or portmanteaus](#).

A safer naming pattern is to place the trademark at the end, following a phrase like "for" or "with".

Examples

Assuming you are creating a plugin that integrates with WooCommerce and you are not WooCommerce:

-  "WooCommerce Prices Updater" Trademarks issue as it implies affiliation with WooCommerce.
-  "Prices Updater WooCommerce" Trademarks issue as it lacks a clear structure indicating no affiliation.
-  "Prices for WooCommerce" It is too generic.
-  "Prices for WooCommerce by miiira". This plugin's distinguishing term shouldn't go at the end. It should be at the beginning.
-  "AB Prices for WooCommerce". The term that distinguishes this plugin should be clearly differentiating, adding a few letters is not enough.
-  "PricesPress for WooCommerce" This is considered portmanteau using the WordPress trademark.
-  "Prices Updater for WooCommerce" Regarding trademarks it avoids indicating affiliation. However, there is a similarity issue, as there are other plugins with similar names.
-  "Easy Prices Updater for WooCommerce" Similarity issue: Adding a generic word to avoid similarity

- won't make it sufficiently distinguishable.
- ✓ "Priconix Sync for WooCommerce" Ok! Original, distinguishable, unique name that is also not in use by others.
- ✓ "miiira Prices Updater for WooCommerce" Ok! as it includes a unique identifier and clarifies unaffiliation ([Ask ChatGPT](#))

Are you the rightful owner of this plugin?

We know this might seem like an odd question — especially coming from an algorithm — but bear with us; it'll all make sense soon.

Here's how it works: If your plugin uses a name or URL associated with a specific entity, we need to confirm that you actually represent that entity. It's that simple.

So, how do we verify your identity? In most cases, we rely on the domain in your email address.

This situation usually comes up if you're using a personal account to submit a plugin meant to represent a company or if you're a third party attempting to upload a plugin on someone else's behalf (please don't do that).

This is what we know **about this plugin**:

- Plugin name: "El Doviz" in the `readme.txt` file
- Plugin name: "El Doviz" in the `el-doviz.php` file
- Slug: el-doviz
- Author: Mira
- Author URI: <https://miiira.com>
- Plugin URI: <https://github.com/LeMiira/el-doviz>
- Contributors:
 - miiira

This is what we know **about you**:

- Username: **miiira**
- Email: miiradiary@gmail.com
 -  Your email domain "gmail.com" does not seem to be related to any of the URLs, names, trademarks and/or or services declared in the plugin.
 -  A gmail.com account cannot be used as a valid form of identification towards clarifying ownership, even if it contains your or your company's name. Anyone can create any gmail.com account that is not already in use. You could be you, but you could also be anyone else.

Please note that we carry out these checks to protect people like you. If someone else submitted a plugin under your name or your company's name, you would rightly be upset if we failed to confirm ownership in a demonstrably reliable way.

✓ You can demonstrate or clarify ownership in one of the following ways:

-  **Update your WordPress.org email address** to one under the domain of the entity associated with the plugin. You can change it in [Your WordPress.org profile](#), we cannot change it for you.
Note: We will continue the review in this email thread. Any new emails will be sent to the new email account.
-  **Reply asking us to transfer this submission to the correct WordPress.org account.** Please, tell us the username. If the owner does not yet have an account, they can create it using an email that is under the domain of the entity associated to the plugin.
 **Do not resubmit this plugin using the new account!** I will transfer it for you. Simply reply to this email with the new username.
Note: Once the plugin has been approved, you can ask the owner to add you as a committer in the

"Advanced" section of the plugin, so that you can commit code using your account.

-  **Change the plugin's display name and slug** to make it clear that the plugin is not officially affiliated with any other entity. Upload an updated version of your plugin via the "[Add your plugin](#)" page. Ask us to change the slug.
- Reply to this email **clarifying the situation**, we know that sometimes you might be using an email account that belongs to the same entity or an entity that owns the other entity. Also, if you already have established plugins in the directory under the same account we can use that as tacit verification.
- Perform a **DNS check on the owner's domain**. Add a TXT record at the owner's domain root @ with the following value: wordpressorg-miira-verification
Note: This will only be considered valid if that's done in the owner's domain and we can relate your account as being controlled by the owner. If you are a third party please follow other verification methods.

Remember that, if you own other plugins, all the plugins belonging to the same entity should be under the same WordPress.org account.

 Please do not resubmit this plugin using a different account. Both submissions will be rejected if you do so, and your accounts may be suspended until the situation is resolved. Instead, ask us to change the owner — we can certainly do that.

Have you checked for common technical issues?

Please ensure that your plugin adheres to best practices, including the following:

Use wp_enqueue commands

 **Why it matters:** Because of performance and compatibility, please make use of the built in functions for including static and dynamic JS and/or CSS.

 **Identify JS and CSS outputs:** Look for any `<script>` or `<style>` HTML tags in your plugin. In the majority of cases you could enqueue them.

 **Fix it:** Make use of the specific function for enqueue them:

Type of code	Functions
Static JS	<code>wp_register_script()</code> , <code>wp_enqueue_script()</code> , <code>admin_enqueue_scripts()</code>
Inline JS	<code>wp_add_inline_script()</code>
Static CSS	<code>wp_register_style()</code> , <code>wp_enqueue_style()</code>
Inline CSS	<code>wp_add_inline_style()</code>

 In the public pages you can enqueue them using the hook `wp_enqueue_scripts()`.

 In the admin pages you can enqueue them using the hook `admin_enqueue_scripts()`. You can also use `admin_print_scripts()` and `admin_print_styles()`.

 As of WordPress 6.3, you can [easily pass attributes like defer or async](#), as of WordPress 5.7, you can [pass other attributes by using functions and filters](#).

Example:

```
function eldo_enqueue_script() {
    wp_enqueue_script( 'eldo_js', plugins_url( 'inc/main.js', __FILE__ ), array(), ELDO_VERSION, true );
}
add_action( 'wp_enqueue_scripts', 'eldo_enqueue_script' );
```

Your JS/CSS is now **enqueued**!

Possible cases from your plugin include:

```
src/Elementor/TickerWidget.php:150 '<style>.el-doviz-ticker { overflow: hidden; white-space: nowrap; padding: 10px; }'
src/Admin/Settings.php:246 echo '<style>'
src/Block/ticker/render.php:34 '<style>.el-doviz-ticker { overflow: hidden; white-space: nowrap; }
```

```
src/Admin/Settings.php:129 echo '<style>
```

Other details

We've detected some other details that you may want to check.

WordPress.org directory assets in the plugin code.

We've detected WordPress.org directory plugin asset files in your submission. Thanks for including them; However, these files (banners, icons, screenshots created for the directory plugin page) are not part of the plugin code and should not be included in your plugin zip file.

Plugin assets should be uploaded to the WordPress.org repository separately after the plugin is approved. This is done through the SVN access.

For more information about plugin assets and how to upload them, please refer to: [How Your Plugin Assets Work](#).

From your plugin:

Archive/assets/screenshot-1.png

Undocumented use of a 3rd Party / external service

Plugins are permitted to require the **use of third party/external services** as long as they are **clearly documented**.

When your plugin reach out to external services, you must disclose it. This is true even if you are the one providing that service.

You are required to document it in a clear and plain language, so users are aware of: **what data is sent, why, where and under which conditions**.

To do this, you must update your readme file to **clearly explain that your plugin relies on third party/external services**, and include **at least the following information** for each third party/external service that this plugin uses:

- What the service is and what it is used for.
- What data is sent and when.
- Provide links to the service's terms of service and privacy policy.

Remember, this is for your own legal protection. Use of services must be upfront and well documented. This allows users to ensure that any legal issues with data transmissions are covered.

Example:

```
== External services ==
```

This plugin connects to an API to obtain weather information, it's needed to show the weather information and forecasts in the included widget.

It sends the user's location every time the widget is loaded (If the location isn't available and/or the user hasn't given their consent, it displays a configurable default location).

This service is provided by "PRT Weather INC": [terms of use](#), [privacy policy](#).

 Please verify that the terms and privacy links exist and they have the proper content. **We will check those links** in the next review.

Example(s) from your plugin:

```
src/Service/DataFetcher.php:27 'tcmb' => 'https://www.tcmb.gov.tr/kurlar/today.xml',  
src/Service/DataFetcher.php:28 'bist' => 'https://bigpara.hurriyet.com.tr/api/v1/borsa/hissetip/bist100',
```

👉 Your next steps

This is your checklist:

1. Is the name of this plugin descriptive and distinctive, and does it respect the trademarks and project names of others?
2. Are you the rightful owner of this plugin?
3. Have you checked for common technical issues?
4. Other details

If there is something that needs to be fixed, please take your time, fix it and update your plugin files at the "[Add your plugin](#)" page, while being logged in with your account "miiira". Then, reply to this email.

Please be concise and do not list the changes done — we will review the entire plugin again — but do share any clarifications or important context you want us to know.

If after checking the list and do the changes you feel that everything is right or need further clarification, please reply to this email and a volunteer will assist you.

If you believe there is a requirement you cannot accomplish and choose not to make changes, your plugin submission will be rejected after three months.

Thanks!

By taking these steps, you're helping the Plugin Review Team work more efficiently — meaning your plugin (along with the thousands of others in the queue) can be reviewed faster. 🚀 We really appreciate your contribution!

Disclaimers

If, at any time during the review process, you wish to change your permalink (aka the plugin slug) "el-doviz", you **must explicitly and clearly tell us what you would like it to be**. Just changing it in your code and in the display name is not sufficient. Remember, permalinks cannot be altered after approval.

This email was partially auto-generated, so please be aware that some information might not be entirely accurate. No personal data was shared with the AI during this process. If you notice any obvious errors or something seems off, feel free to reply — we'll be happy to take a closer look and readjust this automation.

Review ID: AUTOPREREVIEW ! TRM-OWN el-doviz/miiira/26May26/T1 26May26/4.0.1B2 (P0TDX318818HGN)
